

The 30% Rule of IMEs

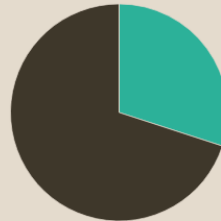

The Unnecessary IME

30%

Of IMEs are deemed unnecessary and contribute to claims leakage.

The Costly IME

30%

Is the approximate average costs of IMEs of MVA injury claims costs.

Supplemental IMEs

30%

Over 30% of IMEs are insufficient and require addendums or supplement reports. This contributes to delays and further expenses.

30%

Is the amount of MVA injury claims that have IMEs done.

prIME Assessment introduces IME360

prIME Assessments, established in Canada in 2016, is focused on leveraging technology to bring structure to the medical chart. By sequential algorithms prIME Assessment has developed methods to improve accessing data in the medical chart, which consists of records from multiple sources, inconsistent formatting, a collection of text, forms and handwritten entries, variable coding systems and lack of structured metadata. These improvements of the data permits deeper analysis of individual and groups of charts using new technologies such as machine learning and artificial intelligence in the fields of chart reviews for medico-legal, public health and research applications.

prIME Assessments has introduced IME360 to ameliorate the controversial present day mechanism that insurance companies use to assess health claims after accident injury by hiring an expert physician to assess the victim and formulate a report; the Independent Medical Evaluation (IME). With IME360, using algorithms, indexing and metadata, relying on technology and human expertise, the unstructured information in the medical chart is converted to more structured data. Furthermore, thorough analysis of the newly available information often can lead to resolution of the contested insurance claim without relying on the formal costly and time consuming IME.
